ADAPTIVE ISSUANCE™ INSTANT FINANCIAL ISSUANCE SOFTWARE

Card management system and card authorization interfaces

A powerful feature of Adaptive Issuance Instant Financial Issuance software is its ability to interact with card management systems (CMS) and card authorization systems (switches), simplifying the overall instant issuance implementation process.

With CMS integrations, Adaptive Issuance software supports two options:

- Integrated Client (iClient): The Adaptive Issuance software iClient integrates to one or more (credit/debit) of your CMS platforms. With this option, the iClient queries the CMS, receives cardholder information, and processes the card issuance request.

- Embedded Client: The CMS provider embeds Adaptive Issuance software functionality (instant issuance, queued issuance, batch issuance, and PIN solutions) within existing application(s). With this option, issuers query the CMS using their existing user interface, select the cardholder information, and process the card issuance using the Adaptive Issuance software functionality that is embedded in their existing application.
